Project Title: Student Attendance Management System (Frontend Prototype)

Project abstract:

This project is a web-based **Student Attendance Management System** developed as a clean, front-end prototype. It is designed to demonstrate a digital alternative to traditional paper-based attendance registers. By focusing strictly on **HTML and CSS**, the system provides a high-performance, lightweight interface that functions entirely within a web browser without the need for server-side processing or external databases.

Objectives

- **User Interface Design:** To create a professional, responsive dashboard that allows teachers to view a class list and mark student status (Present/Absent).
- **User Experience (UX):** To utilize modern CSS techniques (Flexbox, Hover effects, and Accent colors) for an intuitive, easy-to-navigate layout.
- **Data Structure Simulation:** To model how attendance data is captured visually using form elements like radio buttons and tables.

Key Features

- **Responsive Table Layout:** A clean, structured grid that displays Roll Numbers, Student Names, and status toggles.
- **Interactive Toggles:** Custom-styled radio buttons that ensure only one status (Present or Absent) can be selected per student.
- **Device Compatibility:** A mobile-friendly design that adapts to various screen sizes, from tablets to desktop monitors.
- **Visual Feedback:** Interactive button states and row-highlighting to reduce user error during the attendance-taking process.

Conclusion

This project serves as a comprehensive **UI/UX blueprint**. While it lacks a backend for permanent data storage, it provides the essential structural and stylistic foundation required for a full-scale management application. It is an ideal starting point for

developers looking to master static web design before moving into dynamic system integration.

Project can be experienced here:

https://github.com/Jeyaguru-241801108/WEB-TECH-CAT-1-241801108-

User flow:

Entry -> View -> Review Status -> Update Attendance -> Review -> Submission -> Completion
